Speedway Children's Charities BRODERICK BUILDING FUTURES Grant
DUE August 1, 2025
Hanna Academy CTE Program

Speedway Children's Charities Sonoma is proud to announce a new grant, in tribute to the late Earl Broderick of Broderick Engineering (Sonoma, CA). The Earl Broderick "Building Futures" Grant will award an annual grant of $25,000 to (1) Sonoma County youth-based 501(c)(3) non-profit with a focus on STEAM (science, technology, engineering, arts, mathematics) education and/or a program designed to support and guide youth to achieve a career in a STEAM-related field.
In order to qualify, the following requirements must be met:

- Organization must be a 501c3 non-profit for minimum one year (programs that are not a 501c3 will not be considered)
- The program must directly support children and/or teens
- The program must be located in Sonoma County, and primarily serve children from Sonoma County
- The program must already be funded and in effect. Proposals for potential programs will not be considered, although the grant can support additional needs/opportunities for an existing program.
- Budget for the program must meet or exceed $25,000.
- The program must focus on STEAM education and/or a program designed to support youth towards gaining employment in a STEAM-related field (agriculture, technology, engineering, science)

Organizations can apply for both an SCC Sonoma general grant and the Earl Broderick "Building Futures" Grant in the same calendar year. We recommend organizations apply for both grants synonymously, as applications will not be accepted after the deadline regardless of qualifying status. Applications that are selected for second round interviews will be asked to provide background organizational information. ***Applications are due by midnight on Aug. 1, 2025.***
To apply:

1. Please fill out an SCC Sonoma General Grant Application. *NOTE: You can apply for a different program within your organization and different grant amount on this application.*
2. Please fill out the application for the program relative to the Building Futures grant below.

Please describe the program you're requesting funding for.*

The Career Technical Education (CTE) program at Hanna Academy serves students with Individualized Education Programs (IEPs) who require behavioral and emotional support in addition to academic instruction. These students often face complex challenges related to trauma and adversity, and the CTE program provides them with structured, hands-on learning in fields such as construction, culinary arts, and digital technology—helping them build confidence, develop workforce skills, and envision future career paths. This year, the program will expand to include digital photography and graphic design, and 3D design and modeling. The program's core goals are to strengthen students' employability, foster practical life skills, and support long-term self-sufficiency and independence, equipping them with the tools to thrive in both work and community settings.

How does your program promote STEAM education and/or leading youth towards a career in a STEAM related field?*

Hanna Academy's CTE program promotes STEAM education by integrating hands-on, project-based learning that builds both technical and creative skill sets. This year, the program is expanding to include digital photography and design and 3D design and modeling—providing students with access to industry-standard tools and software that introduce foundational concepts in digital media, visual storytelling, design thinking, and industrial design. These courses not only cultivate artistic expression but also develop transferable skills in technology, communication, and problem-solving. The new courses will build foundational skills for careers in architecture, engineering, product development, and the arts. For students with IEPs and behavioral support needs, this structured yet exploratory learning environment supports engagement, builds confidence, and opens pathways toward post-secondary training or careers in creative and tech-driven STEAM fields.

What need does this program address within the community? *

The CTE program at Hanna Academy addresses a critical need for relevant, skills-based education for students with IEPs who require behavioral and emotional support. Within the Hanna Academy community, many students have experienced disrupted learning, trauma, or exclusion from traditional school environments. The CTE program offers an accessible, strengths-based pathway to re-engage them in education through practical, hands-on learning that feels meaningful and empowering. It equips students with the technical skills, workplace readiness, and confidence needed to envision and pursue future employment or further education. For the broader community, the program helps close opportunity gaps by preparing youth—many of whom are from underserved or marginalized backgrounds—for participation in the local workforce, particularly in industries where there is growing demand for skilled, creative, and tech-savvy employees.

Please list additional sources of revenue for the program.*

Previously, the CTE program was supported by a grant from the CTE Foundation of Sonoma County. They are pausing their grant cycle until 2026 so the Academy's CTE program is seeking other support this year. No other grants have been awarded for this program to date.

If your program was to receive this $20,000 grant, please include in detail how the funds would be allocated.*

If awarded this $20,000 grant, Hanna Academy's CTE program would allocate the full amount toward the purchase of high-performance computers equipped to handle the demands of both digital photography and graphic design, as well as 3D design and modeling. This investment represents the most urgent and foundational need for the program's expansion into STEAM-related fields, ensuring that students can engage with industry-standard software and workflows without technical limitations. While the grant would directly fund the computer equipment, the broader program launch also requires additional support: approximately $6,300 for Adobe software licenses in the startup year; $5,500 to acquire used camera bodies and lenses; $2,500 for a high-quality printer and tripods; and roughly $2,200 for essential camera accessories such as filters and flash attachments.

Digital Photo Start-up Cost

TOTAL				**$35,524**	

How many Sonoma County children does the program serve?* 60

Please provide qualifications and background information on the individual responsible for implementing the program.*

The Hanna Academy CTE program is led by an experienced educator who brings a unique blend of technical industry knowledge, instructional skill, and deep commitment to student-centered learning. Now entering his fifth year at Hanna, he began as an instructional aide and gradually stepped into teaching the CTE course after the retirement of a longtime faculty member—quickly discovering a passion for helping students develop tangible skills and confidence through hands-on work. He is currently earning Career Technical Education (CTE) credentials in both Manufacturing and Product Development and Arts, Media, and Entertainment, aligning directly with the program's expanding focus on design, photography, and media production. His background includes direct experience in construction, where he collaborated with architects and engineers and developed an applied understanding of technical drawing and design. He also brings real-world entrepreneurial insight through his own photography business. His approach to curriculum development emphasizes accessibility and engagement—designing projects that meet students where they are, while steadily building toward independence, employability, and creative expression.

Please share any known outcomes and/or statistics that show success and/or learnings from past program experience.*

This will be the first year of Hanna Academy's new digital photography and 3D modeling courses so they do not yet have outcomes or statistics for the success of this program. Survey results from students who have taken other CTE courses at the Academy demonstrate a high perception of usefulness and increases in confidence level as a result of taking the CTE course. Hanna Academy also measures students' perceived readiness for internship in their chosen field and progress within the internships they do secure. The majority of CTE students at the Academy are still considering or looking for internships. In response, Hanna is working with their partner organization on site, Hanna Center, to engage the resources of the Career Center finding and securing jobs and internships.

NOT BEING SUBMITTED W/ GRANT
PURELY INCL. FOR REFERENCE

Hanna Academy CTE Program Report (FY2024-25 Quarter4)

Executive Summary

Given our small respondent pool, these findings reflect only the trends among survey participants and not the entire Hanna Academy student body. Respondents reported **a modest increase in confidence across all classes, maintained high perceived usefulness** both before and after instruction, and experienced a **slight decline in interest** in most cohorts.

However, **Net Promoter Scores were generally low,** with most students rating below 6 on a 1–10 scale, and **many remain undecided about pursuing internships** following their CTE experience.

R&E Recommendations

Based on these observations, Research & Evaluation suggests several improvements.

1. **Increase access to internships** and apprenticeships so that students can build on classroom learning through real-world experience.
2. **Investigate the factors contributing to low promoter scores,**particularly by reviewing any open-ended comments, and **address student concerns where resources allow.**
3. **Refine survey collection methods** to boost response rates

Introduction

During Q4 2024–25, Hanna Academy conducted **pre- and post-assessments** of its CTE elective courses to measure student gains in **confidence** (literacy, practical application, and comprehension), **perceived course usefulness, interests in the courses, and readiness for internships**, with the goal of pinpointing both strengths and areas for improvement.

Methodology

Students completed a pre-assessment at the beginning of the quarter and a post-assessment at the end. The two groups were **independent samples**, with few students completing both assessments. The response rate for the pre assessment was 29% and 27% for the post assessment. Due to a small sample size(n=14 for each survey), results were analyzed using **descriptive medians** only.

Sample Demographics

Among survey respondents, 93% of those who completed the pre-assessment were freshmen, and 71% ..

Grade Level

1st Year at Hanna	Pre	13
	Post	10
2nd Year at Hanna	Pre	1
	Post	2
3rd Year at Hanna	Post	1
4th Year at Hanna	Post	1

CTE Enrolled

Construction	Pre	2
	Post	4
Culinary	Post	1
Health	Pre	4
Health	Post	3
Tech	Pre	5
	Post	6

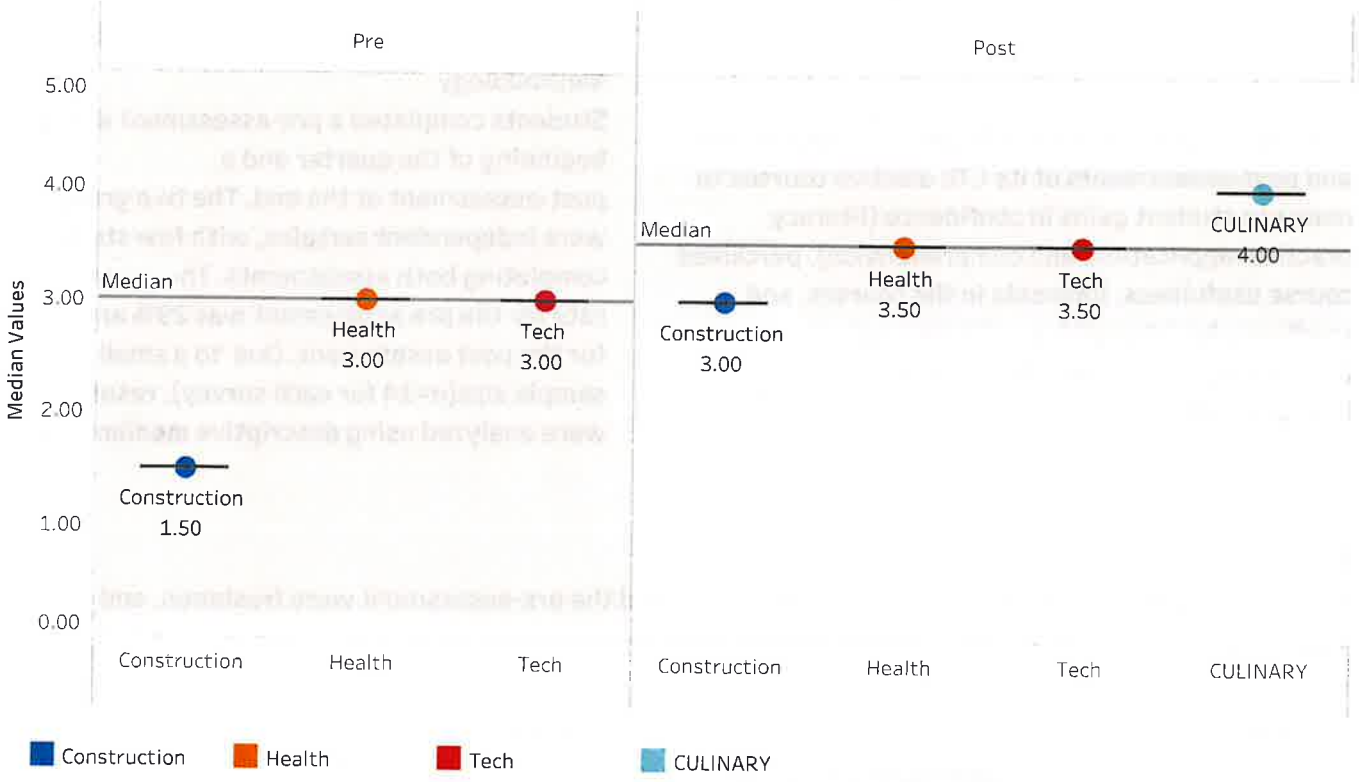
Hanna Academy CTE Program Report (FY2024-25 Quarter4)

Perceived Confidence Levels in the Class

After completing the quarter, median scores rose for Construction (from 1.5 to 3), Health (from 3 to 3.5), and Tech (from 3 to 3.5). Because the median represents the "typical" student response, this shift indicates that most students in these courses felt the course was more valuable post-class. When all courses are aggregated, the overall median increased from 3 to 3.5, underscoring a generally positive impact across the program.

Note: Because no Culinary students completed the pre-assessment, we were unable to compute a median for that cohort. In the chart above, the shaded gray bands depict the 95% confidence intervals around each course's median. These intervals are wide, an expected consequence of our small sample sizes, so R&E recommends treating them as directional rather than definitive. Remember, these findings capture only a subset of the student body and should be interpreted with appropriate caution.

Perceived Confidence Levels (1. Not Confident at All, 5. Very Confident)



Student Comments from Surveys

- more hands-on design projects and cleaner class envirnment to support their leaning

More design projects for 3d printing and soldering

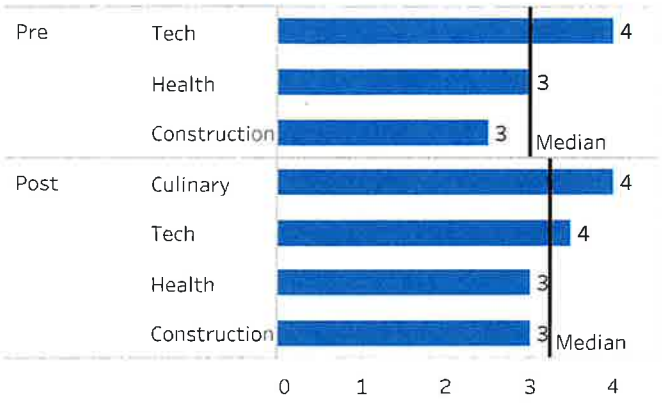
The room kinda smells because of the animals

Hanna Academy CTE Program Report (FY2024-25 Quarter4)

Peceived Usefulness & Interest in the Class

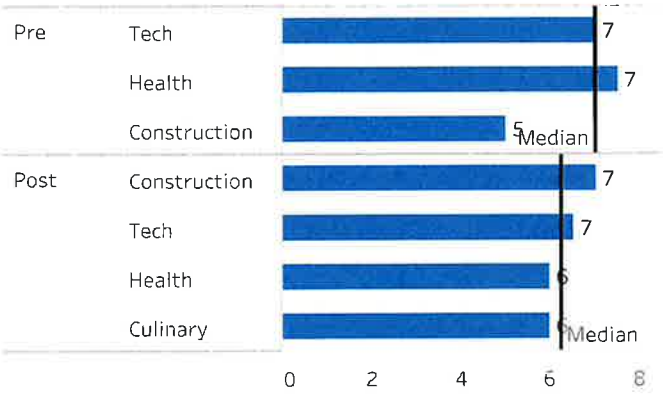
Across all courses, the median score of students' perceived usefulness in the course remained unchanged, whereas the median score of students' interests in the class is lower.

Shifts in Perceived Usefulness



1- Not at all userful, 5 Very useful

Shifts in Interests in Class



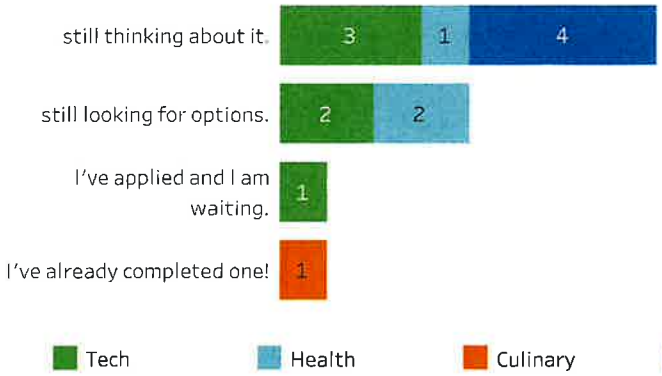
0-Not at all interesting, 10, Extremely interesting

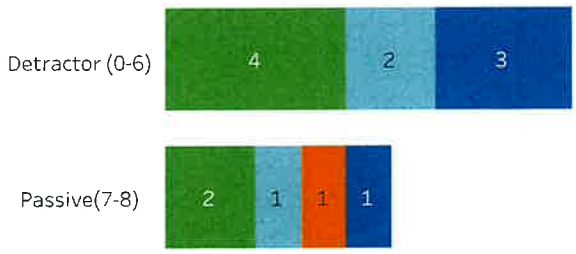
Internship Readiness & Promoter Scores

Most students (57%) who responded to the post-course survey indicated that they are still considering an internship. One student from the culinary class has already completed an internship.

More than half of the respondents (64%) scored less than 6 on a scale from 0 to 10, defining as detractors. These students were primarily from the tech, health, and construction classes. No promopters(9-10) were recorded.

How's your internship going?



How likely would you recommend to friends?


(1, Not at all likely, 10, Extremely likely)
